

PTT-Z for ESChat

Blu-PTT User Guide

General Blu-PTT Pairing Procedure

Example application Eschat

1. Enter Pairing mode:

To enter pairing mode, turn on PTT, press PTT button for 10 seconds then release. Stop all other APP's which could be occupied your PTT communication.

2. Change PTT pairing to a new phone:

1. In phone A, forget(un-pair) the PTT in "Setting" -> "Bluetooth"
2. Turn on PTT, make sure it is **NOT** connected to any phone.
3. Press PTT button for 10 seconds then release (like in 1).
4. Phone B now can scan the PTT button, pair and connect the PTT.

Note:

1. When PTT button connects to phone A, PTT will remember this phone A, no other phones can discover/pair/connect to this PTT even phone A's Bluetooth is OFF.
2. If accidentally press PTT button for 10 seconds in non-connected mode, the pairing info will be erased. Please run 1 or 2 to re-connect the PTT and phone.

Trouble shooting:

1. **Scenario:** If turn Bluetooth OFF then ON in system's setting, the link between ESChat and PTT will lost but ESChat is not able to detect this, PTT stop working.

Fix: Quit ESChat and return to desktop, then switch PTT OFF and ON and back to ESChat, now the connection will established and PTT will work again.

Note: If system Bluetooth has been OFF and ON, PTT device needs do the same, i.e. switch OFF and ON the PTT, in order to notify App the connection is re-established.

2. **Scenario:** Multiple BLE devices connected to the phone: suppose there're two BLE devices, device A is other PTT and device B is Blu-PTT. Now turn off phone's Bluetooth and ON again, although both devices will re-connected, but Blu-PTT will not function again.

Fix: "Forget" all BLE PTT devices (include Blu-PTT) and pair/connect **ONLY** with Blu-PTT

and try again.

3. **Scenario:** More than one PoC Apps are running: some Apps(such as Zello) will connect Blu-PTT automatically before Blu-PTT can connect to the phone, at this moment the phone(under Setting-> Bluetooth) will not able to connect Blu-PTT.

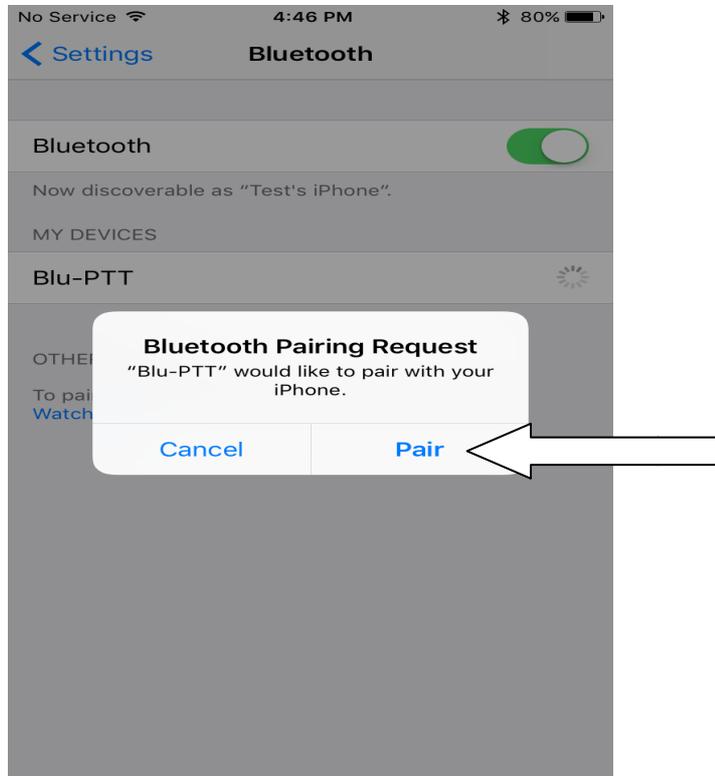

Fix: go Setting-> Application -> Application manager to “**Force Stop**” the App(such as Zello) which will issue the connection with Blu-PTT, and try again.

Note: Blu-PTT supports multiple Apps, some Apps are more “aggressive” than ESChat and will unexpectedly taking the control of the PTT button.

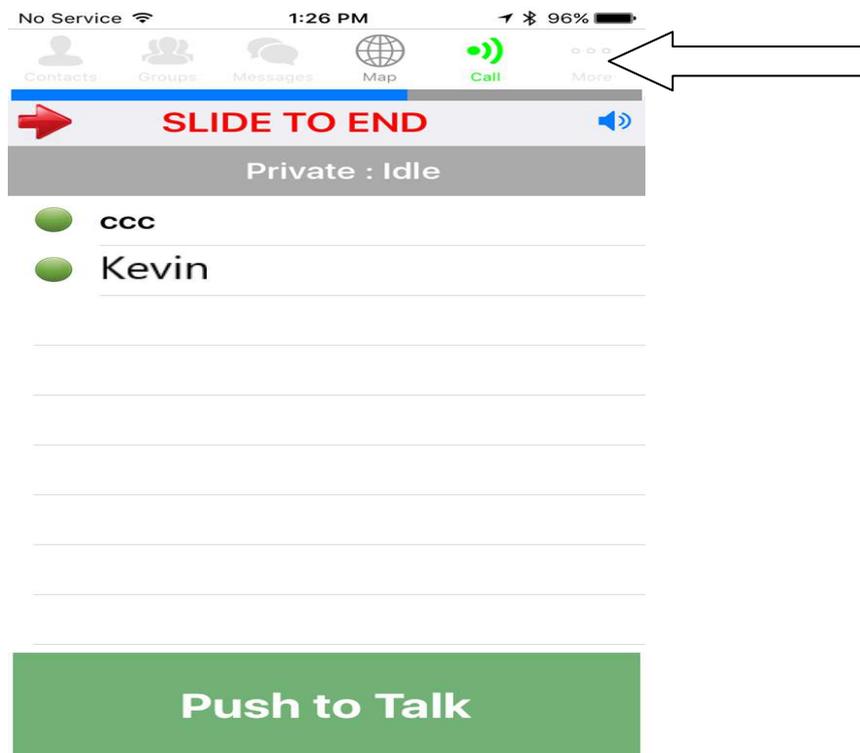

iOS Setting

1. Go to “Setting” -> “Bluetooth”, turn on iPhone’s Bluetooth and BLU-PTT you will find “Blu-PTT”.
